

# Digital WarRoom Pro Hardware Recommendations

The specs of your machine may limit the efficiency of DWR Pro. For the best results, we strongly recommend you consider:

A high end desktop / small server class computer or equivalent

## Processor

- Quad-core Intel® Xeon® or better

## Memory

- Minimum 8GB | Recommended 16GB | Preferred 32 GB

## Storage (GBs)

- One 500-1000 GB drive
- Recommended: two separate physical hard drives
  - One for the operating system, and one for your data and databases
- Preferred: multiple hard drives using RAID 1/5 [1x2TB, 5x2TB]
- Backup: we suggest an external drive to make an occasional backup and/or a network backup

## Video

- 1,024 x 768 pixel resolution monitor
- Dual Screens preferred
- Dual 1920x1080 even better.

Part of eDiscovery workflow is managing a lot of different 'views' of your files and meta-data. You will be more productive with higher resolutions.

## Digital WarRoom Baseline Private Cloud Setup

- Dell R710
- Quad-core Intel® Xeon® 1.8GHz
- 16 GB RAM
- 64 Bit OS
- 100 – 1,000 GB Data Drive

## Digital WarRoom Pro Mobile Laptop Example:

- Dell Precision T3600
- Windows 10 Pro
- Quad-core Intel® Xeon® 3.0 GHz
- 32 GB Ram
- 64 Bit OS
- 2TB Data Drive (two mirrored drives preferred)
